

Laravel Job-Ready Roadmap (For Core PHP Developers)

Phase 1: Laravel Fundamentals (1-2 Weeks)

Topics: - Laravel Installation: Composer, Laravel Installer, Artisan CLI - File Structure: MVC pattern, routes, app/Http, resources/views - Routing & Controllers: Route::get/post, dynamic routes, artisan make:controller - Blade Templates: Layouts, includes, control structures, Blade components - Basic CRUD: Controller + model + migration, form handling, CSRF, DB insert/update/delete - Validation: request()->validate(), error messages, custom rules

Practice: Build a basic blog system (posts CRUD with category)

Phase 2: Eloquent ORM & Database Mastery (1-2 Weeks)

Topics: - Migrations & Seeding: artisan make:migration, seeders, factories - Eloquent Basics: all(), find(), where(), first(), save() - Eloquent Relationships: One-to-One, One-to-Many, Many-to-Many, HasManyThrough - Query Scopes & Accessors: Local scopes, Accessors/Mutators

Practice: Create a mini eCommerce structure (Users → Orders → Products)

Phase 3: Authentication & Authorization (1-1.5 Weeks)

Topics: - Laravel Breeze or Jetstream: Login, Register, Logout, Password reset - Auth Middleware: auth, guest, role checks - Gates & Policies: Gate::define, artisan make:policy - User Roles (Spatie): Use Spatie Permission package for RBAC

Practice: Admin/User dashboard with role-based access

Phase 4: Advanced Features (2 Weeks)

Topics: - File Uploads: File validation, renaming, storage - Emailing: Mailables, Mail::to(), .env SMTP setup - Queues & Jobs: Async tasks, queue drivers, artisan queue:work - Notifications: Database, Email, SMS - Events & Listeners: Real-time actions & hooks - Task Scheduling: CRON setup, schedule() method - Service Container: Dependency injection, service providers

Practice: Build a job portal or contact form with CV upload + email confirmation

Phase 5: APIs & Testing (1.5–2 Weeks)

Topics: - RESTful APIs: API routes, apiResource, Postman testing - Laravel Sanctum: Token-based authentication - Form Request Classes: Cleaner validation using make:request - API Resources: Transforming JSON with make:resource - Testing: Feature & Unit Tests using PHPUnit

Practice: Create a simple to-do API with user auth

Phase 6: Deployment & DevOps (1 Week)

Topics: - Environment Config: .env, config:cache, route:cache - Shared Hosting / VPS: Uploading project, DB import, storage link - Laravel Forge (optional): Server provisioning - Version Control: Git + GitHub flow - Debugging & Logs: Laravel Debugbar, logs in storage/logs

Practice: Deploy your mini project to a live server (e.g., DigitalOcean or Hostinger)

Final Projects to Build for Portfolio

1. Blog System (CRUD, Auth, Categories, Tags)
 2. E-Commerce (Mini) (Cart, Checkout, Product Admin)
 3. Job Portal (CV upload, Role-based access, Email notification)
 4. Event Booking System (Date-based filtering, PDF ticket generation)
 5. RESTful API for Mobile App (JWT/Sanctum auth, resources)
-

Recommended Tools to Learn Alongside

- Laravel Debugbar
- Laravel Telescope
- Postman
- PHPUnit
- Spatie packages
- Git & GitHub
